

Unlocked \$50,000+ Savings with AI-assisted RCM Solution

AI-Assisted Revenue Cycle Management

Introduction

A US-based medical center employing over 50 healthcare professionals was facing challenges such as inefficient workflow management, escalating operational expenses, and productivity limitations. They were looking for a comprehensive CDI solution that could be seamlessly integrated with their existing EHR and encoder systems.

Challenges

- Lack of a unified information system
- Insufficient insights into financial and operational performance
- The lack of automated work list prioritization required the CDI team to handle queries manually

Our Solution

Our team of experts optimized the CDI workflow by automating their manual processes through our AI-assisted CDI solutions. We seamlessly integrated our reliable, cloud-based solution with their existing systems, all while minimizing the need for IT support.

Our team followed a proven methodology to ensure smooth implementation, seamless transition, and efficient operations.
